XP - N1994-087906

AB - J06059452 A polymerising unsatd. polyurethane is prepd. by reacting;
 (a) a polyetherpolyol which is prepd. by block-copolymerising
 polybutylene glycol as a trunk polymer with alkyleneoxide; (b) a
 polyisocyanate and (c) an isocyanate gp-reacting active hydrogen and
 polymerising unsatd. gp-contg. cpd.

- he alkylene is e.g. ethyleneoxide, tetramethylethylene oxide or
 styrene oxide. Cpd. (b) is e.g. tolylene diisocyanate, diphenylmethane
 diisocyanate or tetramethylxylene diisocyanate. Cpd. (c) is e.g.
 styrene, chlorostyrene, mono(meth)acrylate, vinyl acetate or diol
 di(meth)acrylate.

- USE/ADVANTAGE - A resin compsn. (claimed) constitutes a UV-curing
 resin compsn. with ethylenically unsatd. bond-contg. monomer and
 photopolymerisation initiator. The UV-curing resin compsn. is useful
 for coating optical fibre. The resin has good curing properties,
 thermoresistance, working properties because of low viscosity,
 productivity and high reliability. (Dwg.0/0)
